

BUSINESS INTELLIGENCE PORTFOLIO PROJECT

European Fashion Store

Sales & Business Analytics Dashboard

Power BI | Data Analytics & Business Intelligence

[Your Name]

Data Analyst | Business Intelligence Project | Power BI

INTRODUCTION

Project Overview

This project analyzes European fashion-store performance across sales, customers, products, campaigns, inventory, countries and channels — turning raw transactional data into an interactive Power BI decision-making tool.

THE CHALLENGE

Business Problem

Business data is spread across six disconnected tables, leaving stakeholders without a centralized view of overall performance:

Limited visibility into overall sales performance

Difficulty identifying high-performing products

Challenges in understanding customer behavior

Difficulty evaluating campaigns and discount strategy

Limited visibility into inventory & stock-outs

Difficulty comparing countries and sales channels

GOALS

Project Objectives

**Analyze sales & revenue
performance**

Understand customer behavior

**Identify top-performing
products & categories**

Evaluate campaign effectiveness

**Monitor stock & out-of-stock
products**

**Compare country & channel
performance**

**Support data-driven business
decisions**

THE DATA

Dataset Overview

Customer

Demographics & acquisition

Campaign

Campaign & discount information

Product

Brand, category & pricing

Sales Item

Item-level sales transactions

Stock

Inventory and availability

Stores Sales

Sales, customers, channels & revenue

6 TABLES • RELATIONAL BUSINESS DATASET • MULTI-DIMENSIONAL ANALYSIS

PREPARATION

Data Preparation & Transformation

● Data cleaning & duplicate handling

● Null / missing value treatment

● Data-type validation

● Standardization of categorical fields

● Date preparation & formatting

● Relationship creation across tables

● Calculated columns

● DAX measures for KPIs

POWER BI IN ACTION

The Dashboards

A guided walk-through of the report's navigation home, data model and five analytical dashboards, in the same order used inside Power BI.

DASHBOARD 1

Report Home & Navigation

WHAT IT SHOWS

- Central landing page summarizing all 6 connected data tables
- One-click navigation into Campaign, Customer, Product, Sales and Inventory pages
- Short descriptions frame the business purpose of each report page
- Designed for fast orientation across the full analytics suite

BUSINESS QUESTION

How can stakeholders navigate the full analytics suite quickly?

DASHBOARD 2

Data Model & Relationships

WHAT IT SHOWS

- Star-schema style relationships across all 6 tables
- Customers, Products & Campaigns act as dimension context
- Store Sales, Sales Items & Stock carry transactional facts
- One-to-many relationships enable correct filter propagation
- Optimized structure supports fast, accurate DAX measures

BUSINESS QUESTION

How is the underlying data structured to support reliable analysis?

DASHBOARD 3

Campaign Analytics

WHAT IT SHOWS

- 7 campaigns tracked with an average discount value of 3.29
- Discount value by campaign — Early Summer and Easter Promotions lead activity
- Sales evenly distributed across App Mobile, Email, Social Media & Website Banner
- Total sales by age range declines steadily from 69.5K (26-35) to 57.8K (56-65)

BUSINESS QUESTION

Which campaigns and promotional strategies perform effectively?

DASHBOARD 4

Customer Analytics

WHAT IT SHOWS

- Customer count and total sales KPIs with Country / Year filters
- Buying trends by category, led by T-Shirts, Shoes and Dresses
- Average buy price vs MSRP compared across top products
- Country slicers for France, Italy, Germany and the Netherlands

BUSINESS QUESTION

Who are our customers, and how do they contribute to the business?

DASHBOARD 5

Product Performance

WHAT IT SHOWS

- Total product count (499) and total sales KPI
- Category count by brand — Savana, H&M, Zara, Gucci and NEW ME
- MSRP vs Buy Price compared by category to assess margin
- Filters for colour, category and size for deeper drill-down

BUSINESS QUESTION

Which products, brands and categories are driving performance?

DASHBOARD 6

Executive Sales Overview

WHAT IT SHOWS

- Total Sales, customer count and country count at a glance
- Sales volume compared across Instagram vs Mobile App channels
- Category performance overview showing revenue share by product category
- Interactive channel slicer for on-the-fly filtering

BUSINESS QUESTION

How is the fashion store performing overall?

DASHBOARD 7

Inventory & Stock Analytics

WHAT IT SHOWS

- 1,000 total stock units tracked across 499 categories
- Stock status split: 45.65% in stock vs 45.65% out of stock
- Stock quantity by category — Dresses and T-Shirts hold the most units
- Colour-variety breakdown available by individual product

BUSINESS QUESTION

Where are the inventory gaps that could affect sales?

FINDINGS

Key Business Insights

Sales

Instagram outpaces Mobile App (172K vs 153K), and the five product categories share revenue almost evenly (~20% each).

Why it matters: Guides where to focus channel investment.

Customer

1,000 customers span France, Italy, Germany and the Netherlands, with T-Shirts, Shoes and Dresses as the top buying categories.

Why it matters: Shows which segments to target for retention.

Product

499 products across 5 brands (Savana, H&M, Zara, Gucci, NEW ME) show consistent MSRP-to-buy-price margins by category.

Why it matters: Highlights which categories protect margin best.

Campaign

Early Summer and Easter Promotions carry the highest discount activity among 7 tracked campaigns; sales split evenly across 4 channels.

Why it matters: Identifies which campaigns merit repeating.

Inventory

Stock is nearly split down the middle — 45.65% in stock vs 45.65% out of stock across 1,000 units.

Why it matters: Flags a meaningful stock-out risk to manage.

Geography / Channel

Sales are tracked consistently across countries and both digital channels, enabling direct market comparison.

Why it matters: Supports market-level expansion decisions.

NEXT STEPS

Business Recommendations

Reduce stock-out risk for high-demand categories like Dresses & T-Shirts

Reinvest in Instagram given its stronger channel contribution

Repeat and scale Early Summer & Easter-style promotional campaigns

Protect margin by monitoring MSRP-to-buy-price gaps by category

Use age-range and country segmentation for targeted promotions

Track brand-level performance to prioritize top-performing partners

Balance channel mix across Email, Social Media & Website Banner

Adopt the Power BI dashboard for ongoing performance monitoring

CAPABILITIES
